

DIPTO HOWLADER PRETHUL

ASPIRING AI / ML ENGINEER

Gazipur, Dhaka, Bangladesh | 01873343664 | howladerdipto18@gmail.com | LinkedIn | [GitHub](#)

PROFESSIONAL SUMMARY

Final-year CSE student focused on AI/ML engineering, with hands-on experience across the machine learning workflow and a growing specialization in workflow automation using n8n. Comfortable taking a project from raw data to a deployed, working product.

EDUCATION

Bachelor of Science in Computer Science and Engineering (CSE) — Uttara University	<i>Final Year Student</i>
Higher Secondary Certificate (HSC) — M.E.H Arif College	<i>GPA: 5.00 / 5.00</i>
Secondary School Certificate (SSC) — BARI High School	<i>GPA: 4.83 / 5.00</i>

TECHNICAL SKILLS

AI & Machine Learning: Supervised & Unsupervised Learning, ML Algorithms, Data Preprocessing, Feature Engineering, ML Pipeline Design, Data Collection & Analytics, Kaggle Datasets

Deep Learning: PyTorch, Artificial Neural Networks (ANN), Deep Learning Fundamentals

Programming & Data Science: Python, NumPy, Pandas, Matplotlib

Automation & AI Tools: n8n Workflow Automation, Agentic AI Concepts

Database Skills: SQL, Database Querying, Relational Database Concepts

Web Development: HTML, CSS, JavaScript

AI Development Tools & Agents: Codex, Claude, Cursor, Windsurf, Antigravity

Additional Competencies: Prompt Engineering, AI-Assisted Development Workflow, Model Experimentation & Evaluation, Git & GitHub

AI AUTOMATION & N8N PROJECTS

Medi-Hub — AI-Automated Healthcare Booking System [GitHub](#)

A healthcare appointment booking platform with an HTML/CSS/JS frontend running entirely on an n8n backend — no traditional server involved. Patients first chat with an AI symptom-checker (OpenAI/Gemini) before booking a slot; each confirmed appointment is auto-logged to Google Sheets and followed by a Gmail confirmation email, so the whole flow runs without manual work. Currently deployed and live.

Expense Tracker — AI-Powered Personal Finance Automation

A chat-based expense tracker built with n8n, where a user simply types an expense in plain language (e.g. "coffee, 150tk, today") and an AI agent parses it into structured data — amount, category, and date — before saving it straight into a Google Sheet, keeping a running, organized record without ever opening a spreadsheet manually.

Piku — AI Shop Order Processing Automation [GitHub](#)

An n8n-powered automation that handles shop order processing end-to-end using AI, taking incoming orders and automatically parsing, organizing, and routing them through the workflow — cutting out manual order handling.

PROJECTS

- **Titanic Survival Prediction System** — Cleaned and engineered features from the classic Titanic dataset, then trained and compared multiple classification models to predict passenger survival; deployed as a live web app.
- **NYC Predictor** — A machine learning model trained on NYC-related data to generate predictive insights, covering the full pipeline from data cleaning to model evaluation.
- **Mental Health Detector** — An ML/NLP-based system that analyzes text data to flag possible indicators of mental health conditions, aimed at early, low-friction screening.
- **Movie Recommendation System** — A content-based recommendation engine that suggests similar movies from a curated dataset using feature similarity.
- **AI Quiz and Summary Generator** — A Streamlit app that takes in any content and automatically generates quizzes and concise summaries from it using AI.
- **Banking Management System** — A software system built to manage core banking operations such as accounts and transactions.
- **Data Analysis & ML Projects on Kaggle Datasets** — Multiple exploratory data analysis and modeling projects across different Kaggle datasets, covering classification, regression, and data visualization tasks.

Full portfolio and source code available at github.com/prethul

LEADERSHIP & ADDITIONAL SKILLS

Executive Member, Uttara University Machine Learning Club (UUMLC)

Group Leader for a university-organized event, coordinating a team and handling event logistics

COURSES & CERTIFICATIONS

Currently Studying — AI/ML Engineering, Batch 2 — Phitron

Complete Data Analytics — Code With Harry
